

Long-Horizon Vehicle Motion Planning and Control Through Serially Cascaded Model Complexity

March 19, 2024

Abstract

We propose the implementation and experimentation of a motion planning and control framework for autonomous vehicles based on nonlinear model-predictive control. The work is mainly based on [Laurense and Gerdes, 2022]. The code is available publicly at this GitHub repository.

1 Introduction

Citation test:

- Overview of the paper
- Problem statement
- Literature review (?)
- Report outline

2 Methodology

- Concept of MPC for vehicle control
- Concept of serially cascaded models

3 Implementation

- Tools and libraries
- Description of implementation process

- Modifications or adaptations wrt the paper

4 Experimental Setup

- Simulation setting (track etc.)
- Different configuration scenarios

5 Results

- Guess what

6 Conclusion

- Take-away message
- Pitfalls and future work
